The historic centre of **Vilnius** is the cradle of the entire state of Lithuania and a location which is especially significant in the history not only of Lithuania but also of a broad expanse of Eastern Europe, in terms of its political influence, rich architecture, works of art, and the many cultural and scientific ideas that took shape here. It was inscribed on the UNESCO World Heritage List, thus recognising its exceptional universal value.

One of the oldest universities in the world, **Vilnius University**, has 12 faculties and around 23,000 students. The Old Campus houses the University administration and 3 faculties - History, Philology, and Philosophy. There is also a library which was founded in 1570. It contains more than 5 million prints and ancient manuscripts. Among them is one of two copies of the first Lithuanian book known to exist - the original Catechism of Martynas Mažvydas.
